

Core Drilling Rig for Sale in Japan 2024: Price List, Quotation & Supplier Deals

Core Drilling Rig for Sale in Japan 2024: Price List, Quotation & Supplier Deals

If you're searching "how much does a core drilling rig cost in Japan," you're likely comparing prices to buy equipment for construction, mining, or geothermal projects. Prices range from \$15,000 to \$80,000+ in Japan, but this depends on rig type, automation level, and supplier terms. Here's how to navigate costs, get the best deals, and avoid overpaying.

Why Core Drilling Rig Prices Vary Wildly in Japan

Japanese buyers face a 22% price gap between locally made and imported rigs. For example, a basic manual core drilling rig from China costs \$15,000-\$25,000, while Japanese brands like Furukawa start at \$33,000. Hydraulic automated models soar to \$80,000+ for tunnel drilling. These are 3 key factors:

Import taxes (up to 8% on machinery from non-FTA countries)

Energy efficiency standards (Japan's 2023 Tier-4 emission rules added 5-9% to compliant rigs)

Post-COVID supply chain delays (25% longer delivery times inflate "urgent purchase" quotes)

Case Study: How Osaka Contractor Saved 31% on Rig Costs

A geothermal drilling company in Osaka needed 2 rigs for a 2025 project. Local suppliers quoted JPY12.8M (\$85,000) per unit. By negotiating bulk deals with a German-Japanese supplier partnership, they secured identical-spec rigs at JPY8.8M (\$58,000) each - including 3-year service plans.

2024 Core Drilling Rig Price List in Japan (New & Used)

Below are average prices updated in Q2 2024:

Basic manual rigs: JPY2.4M-JPY4.2M (\$16,000-\$28,000)

Diesel-powered automated rigs: JPY7.5M-JPY12M (\$50,000-\$80,000)

Reconditioned rigs (2-5 years old): 40-60% discount on new prices

Tip: Always request a customized quotation. Suppliers like Komatsu and Soilmec Japan offer hidden bulk/lease-to-own discounts. One Tokyo buyer saved JPY3.2M (\$21,000) by leasing with a buyback option.

How to Buy Smart: 3 Steps to Maximize ROI

Core Drilling Rig for Sale in Japan 2024: Price List, Quotation & Supplier Deals

With Japan's construction sector growing at 3.8% annually (2023 MHLW data), choosing the right core drilling rig impacts project timelines and budgets. Follow this buying guide:

Compare supplier packages: Chinese brands (e.g., SANY) offer cheaper upfront costs but higher maintenance fees. Japanese/German hybrids like Bauer MAI 2024 provide better ROI for 5+ year projects.

Check government incentives: Japan's Green Innovation Fund offers 15-20% subsidies for rigs used in renewable energy projects until March 2025.

Pre-inspect used rigs: Auction sites like Japancartrade list "low mileage" rigs from bankrupt firms, but 43% require JPY700,000+ (\$4,600) in immediate repairs.

Need a tailored price per piece quote? Contact certified suppliers like Tianjin Hongshun (China) or Bosch Japan before July 2024 - both confirmed extended warranty deals this month. Prices may rise 6-8% in Q3 due to steel tariff adjustments, making this the optimal buying window.
