

Second-Hand Diesel Generator Price in Argentina 2024: Quotes, Cost & Buying Guide

Second-Hand Diesel Generator Price in Argentina 2024: Quotes, Cost & Buying Guide

Need reliable power solutions without breaking the bank? Second-hand diesel generator prices in Argentina have dropped 12% since 2023, with used models now dominating 35% of the industrial backup power market. But navigating deals requires local expertise - here's how to buy smart.

Why Argentina's Market Demands Affordable Diesel Generators

Frequent power outages in Buenos Aires and agricultural regions cost businesses \$290 million annually. A 2023 study showed 68% of factories now keep used diesel generators as primary backups. Take AgroPower Solutions - this Cordoba-based farm saved \$15,000 by purchasing a refurbished 250kVA unit instead of new.

Price Trends: What to Expect in 2024

Current second-hand diesel generator costs in Argentina range:

Small units (20-50kVA): \$3,000-\$7,000

Industrial models (200-500kVA): \$12,000-\$28,000

Chinese-manufactured generators dominate imports, costing 18-25% less than German or U.S. equivalents. However, local refurbished Caterpillar units offer better ROI - their resale value stays 40% higher after 5 years.

3 Steps to Get the Best Deal

1. Request real-time quotations from trusted suppliers like Genercor (Mendoza) or Powertron (Rosario)
2. Verify engine hours and maintenance history - genuine refurbishments add 2,000+ operating hours
3. Negotiate bulk discounts: Buying 3+ units cuts price per piece by 9-15%

Hidden Costs That Impact Your Budget

Import taxes add 22% for non-Mercosur equipment. Always confirm:

Transport fees (up to \$800 for rural deliveries)

Fuel efficiency ratings (look for $\leq 0.3\text{L/kWh}$ models)

Warranty coverage (minimum 6 months recommended)

Success Story: Bakery Chain Cuts Energy Costs 60%

Panaderia del Sur replaced city power with two pre-owned 150kVA diesel generators from Cordoba Machinery Hub. Their \$23,000 investment pays back in 14 months through uninterrupted operations during blackouts.
