

Second Hand Diesel Generator Price in Mexico 2024: Cost List, ROI & Buying Guide

Second Hand Diesel Generator Price in Mexico 2024: Cost List, ROI & Buying Guide

Looking for second hand diesel generator price in Mexico? You're not alone. Over 45% of Mexican factories and farms now consider pre-owned generators to cut costs while ensuring power reliability. But how do you find quality units at fair prices? Let's break down current market trends, hidden costs, and trusted suppliers.

Why the Rush for Second Hand Diesel Generators in Mexico?

Mexico's manufacturing boom and frequent grid outages have spiked demand. A 2023 report shows used generator sales grew 22% year-on-year, with prices per kWh averaging 30% lower than new models. For example:

200kVA Cummins units: MX\$250,000-320,000

500kVA Perkins models: MX\$580,000-720,000

But beware: Some sellers skip maintenance logs. A Monterrey factory lost MX\$85,000 last year repairing a "low-cost" 150kVA generator from an unverified supplier.

How to Get the Best ROI on Second Hand Units

First, request a quotation with itemized costs. Reputable suppliers like Mexico City-based Electropower Solutions include:

Hour meter validation

Fuel efficiency reports

12-month service warranty

Compare this with Chinese imports - while MX\$50,000 cheaper upfront, their repair costs often double within 2 years.

Hidden Costs That Change Your Total Price

Many buyers forget:

Import taxes (15-25%) for US/European units

Fuel filters (MX\$800-2,000 monthly)

Battery replacements (MX\$3,500+/year)

Case Study: Aguascalientes Auto Plant Saves 35%

By choosing a refurbished 800kVA diesel generator from Germany's Deutz (MX\$1.1M), they avoided MX\$620,000 in new-equipment costs. Key steps:

Second Hand Diesel Generator Price in Mexico 2024: Cost List, ROI & Buying Guide

Verified 4,200 engine hours via dealer records

Tested under 75% load for 2 hours

Negotiated free delivery within Mexico

2024 Market Alert: New Policies Affect Pricing

Mexico's updated emissions rules may phase out non-EPA Tier 2 generators by 2026. Smart buyers prioritize compliant models like Caterpillar C15 (MX\$380,000-450,000) for longer resale value.
