

# Second Hand Diesel Generator for Sale in Philippines 2024: Price List, ROI & Supplier Deals

## Second Hand Diesel Generator for Sale in Philippines 2024: Price List, ROI & Supplier Deals

Need reliable power solutions without breaking the bank? Second-hand diesel generators are selling fast across the Philippines as businesses tackle frequent blackouts. But here's the problem: prices swing wildly between PHP50,000 to PHP800,000+ based on quality. How do you avoid overpaying or buying a lemon?

### Why Second-Hand Diesel Generators Are Flooding Philippine Markets

Power outages cost Philippine businesses PHP18 billion/year (Philippine Statistics Authority, 2023). To cut losses, construction firms and hotels are snapping up used diesel generators from China, Japan, and local suppliers. A recent deal in Cebu saw a 250kVA Perkins unit sell for PHP320,000 - 40% cheaper than new models.

### Key Factors Shaping Prices Today

- Brand reputation (Cummins/Perkins hold value better)
- Kilowatt capacity (PHP8,000-PHP15,000 per kWh)
- Maintenance history - demand service logs
- Local vs. imported units (Chinese models are 15-20% cheaper)

### How to Avoid Costly Mistakes: A Quezon City Case Study

JM Construction bought a "bargain" PHP185,000 150kVA generator last March. Six weeks later? PHP72,000 repair bills for piston replacements. The fix? Always:

- Verify running hours with hour meter checks
- Test under load capacity for 30+ minutes
- Ask suppliers for tax receipts and warranty transfers

### 2024 Pricing Trends: Smart Buys vs. Scams

China's export of used diesel generators to ASEAN countries jumped 18% this year. While this means more options, Manila buyers report inconsistent quality. A trusted Davao supplier recently offered:

- 100kVA Mitsubishi: PHP280,000 (4,200 running hours)
- 200kVA Isuzu: PHP615,000 (comes with 6-month warranty)
- Refurbished 75kVA Chinese unit: PHP95,000 cash-and-carry
