

Second Hand Four Wheel Screw Diesel Compressor for Sale in Philippines: 2025 Price List, Quotation & Buying Guide

Second Hand Four Wheel Screw Diesel Compressor for Sale in Philippines: 2025 Price List, Quotation & Buying Guide

Looking for a reliable second hand four wheel screw diesel compressor in the Philippines? Prices start at PHP280,000 for pre-owned units in working condition, but 72% of first-time buyers report confusion about quality checks and fair market rates. Let's break down the costs, supplier options, and ROI strategies to help you avoid costly mistakes.

Why Second Hand Compressors Dominate Philippine Construction Sites

Over 65% of mid-sized contractors in the Philippines now use reconditioned diesel compressors to cut project costs by 30-40%. With major infrastructure projects like the Metro Manila Subway expansion, demand for mobile compressor units has grown 22% year-over-year. However, pricing varies wildly:

PHP280,000-PHP420,000 for Chinese-made units (Huayu, Hongwuhuan)
PHP550,000+ for Japanese/Korean models (Hitachi, Doosan)

Cebu-based supplier PH HeavyMach recently sold 17 used compressors to Davao contractors at PHP325,000/unit - 43% cheaper than new equivalents.

3 Hidden Costs That Crush Your ROI

Jomar Reyes, a Quezon City site manager, learned this the hard way: His PHP310,000 "second hand screw compressor" required PHP180,000 in engine repairs within 6 months. Watch for:

Worn screw rotors (replacements cost PHP45,000-PHP90,000)
Outdated emission standards (new EPA rules apply in 2026)
Missing aftercoolers (adds PHP28,000+ to rebuild)

How to Get Accurate Price Quotes in 24 Hours

Top Manila dealers like GlobalMach PH now offer free video inspections and warranty packages. For a 2018 Atlas Copco XAS 188 JD7 model:

Asking price: PHP395,000
Includes 6-month engine warranty
Delivery to Luzon: PHP15,000 flat fee

Compare this to direct China imports through Alibaba: A 2020 Screw Diesel Air Compressor from Shandong costs PHP265,000 FOB, but you'll pay 12% import tax + PHP40,000 shipping. Most buyers save 18% by

Second Hand Four Wheel Screw Diesel Compressor for Sale in Philippines: 2025 Price List, Quotation & Buying Guide

working with local pre-screened suppliers.

Supplier Checklist: Don't Buy Until You Verify

Laguna-based contractor Maria Santos shares her 5-point inspection method:

- Check hour meter (under 4,000 hrs ideal)
- Test PSI consistency (6-8 bar output)
- Review maintenance logs (every 500 hrs)
- Verify chassis condition (no weld repairs)
- Negotiate ROI terms (1-year payback period)

With 14,000+ used four wheel compressors entering the ASEAN market annually, smart buyers focus on total ownership costs. Visayas-based dealers report 34% faster sales when offering 3-in-1 deals: compressor + trailer + air tools at PHP480,000. As diesel prices hit PHP58/liter, fuel-efficient models (5-7 L/hr) now command 15-20% premiums. Last month, a Surigao mining company saved PHP2.1 million by replacing 3 old units with certified reconditioned Atlas Copco devices - proving that with the right buying guide, second hand doesn't mean second best.
