

# Second Hand Stationary Air Compressor for Sale 2024: Price List, ROI & Supplier Deals

Second Hand Stationary Air Compressor for Sale 2024: Price List, ROI & Supplier Deals

Looking for a second hand stationary air compressor price in Philippines? You're not alone. Over 62% of factories in Manila now use refurbished equipment to cut costs. Let's break down what you need to know before buying.

## Why Prices Vary (And How to Get the Best Deal)

Used stationary compressors in the Philippines sell between PHP45,000 to PHP220,000 (\$800-\$4,000), but why the huge gap? The price depends on:

- Brand reputation (Atlas Copco vs local Chinese models)
- Capacity (5HP vs 30HP units)
- Service history (complete maintenance logs add 20% value)

## Real-World Example: Cebu Food Processing Plant

A Cebu-based factory saved PHP1.2M by purchasing a 2020-model Ingersoll Rand compressor through Philippine used machinery suppliers. The machine's ROI came in 8 months vs 3 years for new equipment.

## 2024 Market Trend: More Refurbished Units Available

The Philippine?? equipment market grew 8% in 2023, driven by:

- Government tax breaks for eco-friendly factories (RA 11285)
- Chinese suppliers offering 6-month warranties on refurbished compressors
- Shift to cheaper alternatives amid rising electricity costs

## Buying Guide Tip: Check These 3 Supplier Credentials

When comparing second hand stationary air compressor suppliers, always verify:

- PH ISO 9001 certification
- On-site testing options
- Parts availability (ask for common spare prices)

## How to Negotiate Your Quotation

A Cavite machinery dealer told us: "Buyers who purchase during rainy season (June-September) typically get 12-15% discounts." For units costing PHP150,000+, always request:

- Free delivery within Luzon

## Second Hand Stationary Air Compressor for Sale 2024: Price List, ROI & Supplier Deals

- Basic maintenance training
- 30-day performance guarantee

### Last-Mile Checklist Before Payment

Before finalizing your stationary air compressor purchase, run these tests:

1. Check oil temperature after 30 mins of operation
2. Measure air output (CFM) against factory specs
3. Inspect the tank interior with a borescope camera

Most buyers in Davao and Cagayan de Oro now use China-sourced refurbished units due to lower price per piece. A typical 7.5KW compressor costs 35% less when imported from Guangdong vs European models, even after customs fees.
